

Notable MYOB EXO improvements from version 7.x – 2016.2

- Live Bank Feeds function to the EXO Finance module, which downloads bank statement transactions using an online service, and matches them to transactions in the EXO Business database. This streamlines the bank reconciliation process by pre-matching transactions before they are brought into the bank reconciliation
- Enhancements to document management
- Ability to set up Extra Fields on Works Orders
- Exo OnTheGo: Mobile access to all MYOB modules on an iPad Air, at any time
- The focus of the 2015.1.3 release is on providing enhancements to the EXO Job Costing module and resolving issues identified in previous releases
- Un-write off Job Lines
- Various EXO CRM improvements
- Licensing changes and a fix to the EXO Intercompany module.
- The ability to file your NZ GST return online direct from MYOB EXO
- Additional Stock Search Templates
- Improved printing of Clarity reports to Microsoft Excel
- The ability to schedule the posting of Ledgers to the GL
- A number of other enhancements most requested by users and implementers of the EXO system, and of course some resolutions to known issues
- A new feature highlight for New Zealand users is the ability to submit and review GST returns via a new MYOB cloud service. For Australian users involved in construction related activity, there is a new cloud-based Taxable Payments Annual Report (TPAR) submission process using Standard Business Reporting (SBR)
- Enhancements to Purchase Order entry, which are aligned with recent work in Sales Orders to utilise the popular framework features, such as search templates, line-level Extra Fields and grid column controls. This allows you to further simplify or enhance the Purchase Order entry process.

Plus literally 1000s of other minor improvements to various module core functions, resolved known issues and new features.
